

Job Title: Front end Software Engineer

Period: Full time

Job purpose:

We are looking for talented people to design, develop and deploy high quality software components for our camera systems. As a software intern, you will be developing super modular video acquisition and processing systems for VR/AR and machine vision applications. You will get an hands on experience by working on modern cameras to build systems which can capture, process and store VR content in real time.

Duties & Responsibilities:

- Build scalable front end applications to support the growing needs of the business
- Manage projects and collaborate with key stakeholders
- Experience developing consumer-facing software
- Experience developing software systems of medium-to-large scope and complexity.
- Work with UI/UX design engineers to implement the design.
- Includes development, writing code and documenting the functionality.
- Deploying functional software with operational specifications.
- Understanding different platforms and able to develop applications.

Required Skills & Experience:

- Hands on experience in designing software applications.
- Solid skills in C, C++, python based front end applications.
- Ability to develop softwares using Object Oriented Programming is a plus.
- Experience in developing an end-to-end software.
- Experience in multi threading and GUI frameworks.
- Strong experience in developing applications in one or more but not limited to Qt, Tk, wxWidgets, JavaFX/Swing, GTK+ etc.
- A passion for front end design and/or web application development.

Desired Skills & Experience:

- Prior experience in desktop based applications, embedded applications, web applications
- Experience with Database technologies like MySQL, PostgreSQL, and MongoDB.
- Comfortable with Web fundamentals like HTML, JavaScript, and CSS
- Understanding of web server technologies like Node.js, Apache, Nginx, etc.

Minimum Qualification

- Bachelor's degree in Computer Engineering or related field.
- Minimum 1 year of experience in frontend software development or equivalent project.
